PROFILE

Backend and Full-Stack Developer with experience building server-side application logic, REST APIs, third-party integrations, and automated product workflows. Professional experience includes full-stack development at Genesis and backend and AI engineering at Sigma Software, with Python as a core programming language.
Technical skills include Node.js, Express, TypeScript, PostgreSQL, and React, alongside Python and FastAPI. Comfortable connecting backend services, external APIs, databases, and user-facing applications, with a focus on maintainable implementation and end-to-end product delivery.

EMPLOYMENT HISTORY

◆ **Software Engineer, Genesis**..... 2022-2026
Kyiv, Ukraine | Remote

- Contributed to full-stack product development across backend services, integrations, and automated workflows.
- Built and improved backend APIs and web application functionality supporting product workflows.
- Integrated LLM capabilities and other AI services into application features and automation flows.
- Used Python as the primary programming language for backend and AI-related development.
- Connected backend logic, external service integrations, and frontend functionality during application delivery.

◆ **Generative AI Engineer, Sigma Software**..... 2019-2022
Kharkiv, Ukraine | Hybrid

- Worked on generative AI solutions and AI-powered product features using Python, LLM APIs, and modern backend technologies.
- Integrated language models into web applications and backend services.
- Built application logic around AI-enabled functionality, with an emphasis on practical LLM-based product use cases.
- Worked with API-driven AI integrations and backend components supporting generative AI features.
- Applied Python and artificial intelligence skills across generative AI product development.

EDUCATION

◆ **Bachelor's Degree, Computer Software Engineering - National Aerospace University 'Kharkiv Aviation Institute'** 2014-2018

- Relevant areas: Artificial Intelligence (AI), Python programming, software engineering, and application development.

TECHNICAL SKILLS

Backend & APIs: Node.js, Express, Python, FastAPI, REST APIs, Webhooks
Languages: TypeScript, JavaScript, Python
Databases: PostgreSQL, MySQL, MongoDB
Integrations & Automation: Third-party APIs, authentication workflows, n8n, Data Processing, Web Scraping
Frontend: React, Next.js, Ant Design, Tailwind CSS
Cloud & Tools: Docker, Git, GitHub, Linux, AWS, GCP, Azure, Railway, Render, ngrok
AI & LLMs: LLM Integration, Generative AI, OpenAI API, Claude API, Gemini API, Hugging Face
Machine Learning: PyTorch, torchvision, Model Evaluation, Fine-Tuning, YOLO, Whisper, STT/TTS
Service Integrations: Gmail, Google Sheets, HubSpot CRM, external service workflows

SELECTED AI & SOFTWARE PROJECTS

◆ **AI-Powered Lead Processing & CRM Automation**.....

- Built an automated lead-processing workflow that monitors incoming email and uses AI to extract structured lead information.
- Saved extracted data to Google Sheets, created or updated HubSpot contacts, and generated personalized email responses.
- Configured workflow logic, AI prompts, data mapping, service integrations, and automation steps in n8n.
- **Tech Stack:** n8n, Python, OpenAI API, Gmail, Google Sheets, HubSpot, REST APIs, Webhooks

◆ **Multimodal AI Application - Computer Vision, STT & TTS**.....

- Built a multimodal application combining object detection, speech recognition, and speech generation.
- Developed FastAPI services for detection, text-to-speech, and speech-to-text, and connected them to a React frontend.
- Worked with YOLO-based detection, Whisper speech recognition, Kokoro TTS, image processing, and browser audio workflows.
- **Tech Stack:** Python, FastAPI, YOLO, OpenCV, Whisper, Kokoro, PyTorch, React

◆ **Deep Learning Model Evaluation & Fine-Tuning**.....

- Built evaluation and fine-tuning workflows for EfficientNet-V2-L on ImageNet-1K-style data.
- Measured Top-1 and Top-5 accuracy, prepared datasets, tested robustness to perturbations, and worked with GPU-based training.
- Used PyTorch and torchvision for model execution and Hugging Face tooling for dataset and model workflows.
- **Tech Stack:** Python, PyTorch, torchvision, Hugging Face, CUDA, EfficientNet-V2, ImageNet

◆ **AI Healthcare Chatbot & Patient Support Platform**.....

- Developed an AI-powered chatbot platform for conversational support, information access, and common service workflows.
- Worked on AI integration, backend APIs, responsive web interfaces, and application workflow automation.
- Connected conversational functionality with full-stack product components and third-party service flows.
- **Tech Stack:** Python, FastAPI, OpenAI / LLM APIs, React, Next.js, REST APIs, Databases

PROFESSIONAL STRENGTHS

- Full-stack ownership from backend APIs and integrations to frontend delivery.
- Backend service integration focused on practical product workflows and automation use cases.
- Ability to work with existing systems, APIs, data pipelines, and third-party platforms.
- Clear communication, structured problem solving, and attention to maintainable implementation.
